282 women die per 100,000 live births due to pregnancy-related causes in the Republic of Congo

The maternal mortality ratio in the Republic of Congo has improved from 660 in 2000 to 282 in 2020. Maternal mortality in the Republic of Congo is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

105 of every 1,000 girls ages 15-19 gave birth in the Republic of Congo in 2020

In the Republic of Congo, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was higher than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

62.6% of girls and 64.1% of boys complete lower secondary school in the Republic of Congo as of 2018 data

The female rate in the Republic of Congo is higher than Sub-Saharan Africa but lower than the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in the Republic of Congo is lower among women than among men (2021)

The adult female literacy rate in the Republic of Congo is higher than in Sub-Saharan Africa. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)

In the Republic of Congo, the labor force participation rate is nearly the same: 66.9% among females and 68.3% among males for 2022. The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in the Republic of Congo.

Vulnerable employment for females has improved in the Republic of Congo since 1991. Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 89.3% and among men is 62.2% in the Republic of Congo for 2021. The rate of vulnerable employment is lower for men but higher for women in the Republic of Congo compared to the average rate in Sub-Saharan Africa.

16.4% of women owned a dwelling either alone or jointly in 2012

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.
