72 women die per 100,000 live births due to pregnancy-related causes in Honduras

The maternal mortality ratio in Honduras has remained stagnant over the last 20 years roughly around 72. Maternal mortality in Honduras is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

73 of every 1,000 girls ages 15-19 gave birth in Honduras in 2020

In Honduras, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was higher than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

51.6% of girls and 42.1% of boys complete lower secondary school in Honduras as of 2016 data

The female rate in Honduras is lower than both Latin America & Caribbean and the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in Honduras is nearly the same among women and men (2019)

The adult female literacy rate in Honduras is lower than in Latin America & Caribbean. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)

In Honduras, the labor force participation rate among females is 49.4% and among males is 77% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Honduras.

![Labor force participation rate, by sex (% of population ages 15+) (modeled ILO estimate)](image)

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 49.4% and among men is 35.4% in Honduras for 2021. The rate of vulnerable employment is similar for men but higher for women in Honduras compared to the average rate in Latin America & Caribbean.

43.5% of men and 35.3% of women owned a dwelling either alone or jointly in 2012

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women's empowerment, nutritional and health outcomes, and children's schooling.
