173 women die per 100,000 live births due to pregnancy-related causes in Indonesia

The maternal mortality ratio in Indonesia has improved from 299 in 2000 to 173 in 2020. Maternal mortality in Indonesia is higher than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

34 of every 1,000 girls ages 15-19 gave birth in Indonesia in 2020

In Indonesia, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was lower than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

92.7% of girls and 87.4% of boys complete lower secondary school in Indonesia as of 2017 data

The female rate in Indonesia is nearly the same as East Asia & Pacific but higher than the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in Indonesia is lower among women than among men (2020)

In Indonesia, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)

In Indonesia, the labor force participation rate among females is 52.7% and among males is 80.6% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Indonesia.

**Vulnerable employment for females has improved in Indonesia since 1991**

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 58.3% and among men is 43.4% in Indonesia for 2021. The rate of vulnerable employment is higher for men and women in Indonesia compared to the average rate in East Asia & Pacific.

68.1% of men and 50.6% of women owned a dwelling either alone or jointly in 2017

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women's empowerment, nutritional and health outcomes, and children's schooling.
