In Israel, the labor force participation rate among females is 60.2% and among males is 67.2% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is lower in Israel.

**Vulnerable employment for females has worsened in Israel since 1991**

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 7.3% and among men is 9.3% in Israel for 2021. The rate of vulnerable employment is lower for men and women in Israel compared to the average rate in Middle East & North Africa.
