79% of girls and 79.4% of boys complete lower secondary school in Kenya as of 2016 data

The female rate in Kenya is higher than Sub-Saharan Africa but nearly the same as the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

![Lower secondary completion rate graph]

Adult literacy in Kenya is lower among women than among men (2021)

The adult female literacy rate in Kenya is higher than in Sub-Saharan Africa. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

![Adult literacy rate graph]

In Kenya, the labor force participation rate among females is 72.7% and among males is 76.1% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Kenya.

Vulnerable employment for females has improved in Kenya since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 69.1% and among men is 52.3% in Kenya for 2021. The rate of vulnerable employment is lower for men and women in Kenya compared to the average rate in Sub-Saharan Africa.
In 2017, 77.7% of women and 85.8% of men in Kenya had an account.

The female rate in Kenya is higher than both Sub-Saharan Africa and the lower-middle income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

51.4% of men and 42.3% of women owned a dwelling either alone or jointly in 2014

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women's empowerment, nutritional and health outcomes, and children's schooling.
