50 women die per 100,000 live births due to pregnancy-related causes in the Kyrgyz Republic

The maternal mortality ratio in the Kyrgyz Republic has improved from 87 in 2000 to 50 in 2020. Maternal mortality in the Kyrgyz Republic is higher than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

35 of every 1,000 girls ages 15-19 gave birth in the Kyrgyz Republic in 2021

In the Kyrgyz Republic, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2021 was lower than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

98.7% of girls and 98.5% of boys complete lower secondary school in the Kyrgyz Republic as of 2021 data

Girls and boys in the Kyrgyz Republic have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy rate in the Kyrgyz Republic is nearly the same among women and men (2019)

In the Kyrgyz Republic, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)

In the Kyrgyz Republic, the labor force participation rate among females is 45.4% and among males is 74.7% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has decreased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in the Kyrgyz Republic.

Vulnerable employment for females has improved in the Kyrgyz Republic since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 26.4% and among men is 34.6% in the Kyrgyz Republic for 2021. The rate of vulnerable employment is higher for men and women in the Kyrgyz Republic compared to the average rate in Europe & Central Asia.

64% of men and 52.4% of women owned a dwelling either alone or jointly in 2012

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.
