39 women die per 100,000 live births due to pregnancy-related causes in Mongolia

The maternal mortality ratio in Mongolia has improved from 158 in 2000 to 39 in 2020. Maternal mortality in Mongolia is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

28 of every 1,000 girls ages 15-19 gave birth in Mongolia in 2020

In Mongolia, the rate of adolescent fertility has increased since 2010. The rate in 2020 was lower than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

90.4% of girls and 90.7% of boys complete lower secondary school in Mongolia as of 2021 data

The female rate in Mongolia is lower than East Asia & Pacific but higher than the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in Mongolia is nearly the same among women and men (2020)

In Mongolia, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)
In Mongolia, the labor force participation rate among females is 52.1% and among males is 67% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has decreased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Mongolia.

**Vulnerable employment for females has improved in Mongolia since 1991**

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 43.1% and among men is 48.2% in Mongolia for 2021. The rate of vulnerable employment is higher for men but similar for women in Mongolia compared to the average rate in East Asia & Pacific.
