174 women die per 100,000 live births due to pregnancy-related causes in Nepal

The maternal mortality ratio in Nepal has improved from 504 in 2000 to 174 in 2020. Maternal mortality in Nepal is higher than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

65 of every 1,000 girls ages 15-19 gave birth in Nepal in 2020

In Nepal, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was higher than the average rate in its income group.

100.8% of girls and 104.8% of boys complete lower secondary school in Nepal as of 2022 data

Girls and boys in Nepal have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in Nepal is lower among women than among men (2021)

The gap in adult literacy between men and women, 17.7, is larger than the gap of the South Asia aggregate, 15.7. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

In Nepal, the labor force participation rate among females is 28.6% and among males is 53.1% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Nepal.

Vulnerable employment for females has improved in Nepal since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 90% and among men is 61.7% in Nepal for 2021. The rate of vulnerable employment is lower for men but higher for women in Nepal compared to the average rate in South Asia.
Data is not available for Nepal for Proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day)

More men than women owned a business in 2018

The share of female business owners for Nepal falls in the second quintile of all countries for which there are data. Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2016 and 2018.

Share of business owners, by sex (% of total business owners)

19.3% of men and 7.8% of women owned a dwelling either alone or jointly in 2016

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.
