8 women die per 100,000 live births due to pregnancy-related causes in Qatar

The maternal mortality ratio in Qatar has improved from 28 in 2000 to 8 in 2020. Maternal mortality in Qatar is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

8 of every 1,000 girls ages 15-19 gave birth in Qatar in 2020

In Qatar, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was nearly the same as the average rate in its income group.

89.6% of girls and 95% of boys complete lower secondary school in Qatar as of 2021 data

The female rate in Qatar is higher than Middle East & North Africa but lower than the high-income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in Qatar is nearly the same among women and men (2017)

In Qatar, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

In Qatar, the labor force participation rate among females is 60.5% and among males is 96.8% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is higher in Qatar.

**Labor force participation rate, by sex (% of population ages 15+) (modeled ILO estimate)**

More men than women owned a business in 2018.

The share of female business owners for Qatar falls in the lowest quintile of all countries for which there are data. Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2016 and 2018.

Share of business owners, by sex (% of total business owners)

In 2011, 61.6% of women and 68.6% of men in Qatar had an account.

The female rate in Qatar is higher than Middle East & North Africa but lower than the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.
