30 women die per 100,000 live births due to pregnancy-related causes in the Syrian Arab Republic

The maternal mortality ratio in the Syrian Arab Republic has remained stagnant over the last 20 years roughly around 30. Maternal mortality in the Syrian Arab Republic is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

Syrian Arab Republic
Middle East & North Africa
Low income

39 of every 1,000 girls ages 15-19 gave birth in the Syrian Arab Republic in 2020

In the Syrian Arab Republic, the rate of adolescent fertility has decreased since 2010. The rate in 2020 was lower than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

Syrian Arab Republic
Middle East & North Africa
Low income

54.3% of girls and 53.4% of boys complete lower secondary school in the Syrian Arab Republic as of 2013 data

The female rate in the Syrian Arab Republic is lower than Middle East & North Africa but higher than the low-income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Female
Male
Syrian Arab Republic
Middle East & North Africa
Low income

Adult literacy in the Syrian Arab Republic is lower among women than among men (2014)

The adult female literacy rate in the Syrian Arab Republic is higher than in Middle East & North Africa. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)

Male
Syrian Arab Republic
Middle East & North Africa
Low income

In the Syrian Arab Republic, the labor force participation rate among females is 16.8% and among males is 72.3% for 2022.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has decreased. Compared with labor force participation in the low-income group, the gap between men and women is higher in the Syrian Arab Republic.

Vulnerable employment for females has improved in the Syrian Arab Republic since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 11.3% and among men is 42.7% in the Syrian Arab Republic for 2021. The rate of vulnerable employment is higher for men but lower for women in the Syrian Arab Republic compared to the average rate in Middle East & North Africa.
