In Latin America & Caribbean, the labor force participation rate in females is 51% and in males is 74.3%.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with the labor force participation in the world, the gap between men and women is lower in Latin America & Caribbean.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 34.7% and among men is 34.6% in Latin America & Caribbean for 2021.

In all countries in Latin America & Caribbean for which there are data, women spend more time than men on unpaid domestic and care work.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. Data compiled from the most recent data point between 2010 and 2019.

Source: National statistical offices or national database and publications compiled by United Nations Statistics Division. The data were downloaded on December 3 from the Global SDG Indicators Database.
In all countries for which there are data, more men than women own a business

Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2010 and 2020.

Share of business owners, by sex (% of total business owners)

In 2017, 52% of women and 58.6% of men in Latin America & Caribbean had an account

The gap in account ownership between men and women in Latin America & Caribbean, 6.6, is smaller than the gap of the world aggregate, 7.4. The account ownership rates for both women and men in Latin America & Caribbean are lower than the global rates. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

**By the time they are 19 years old, roughly 1 in 5 adolescent girls from Latin America & Caribbean who have been in a relationship will have ever been physically or sexually abused by a current or former partner**

Lifetime intimate partner violence (IPV) measures the proportion of the female population who have ever experienced such violence at least once in their lifetime. IPV in the past year indicates how prevalent this violence still is in society today and is globally reported on as SDG indicator 5.2.1. In Latin America & Caribbean, adolescent girls and young women are more at risk of experiencing IPV in the last 12 months than adult women.

| Proportion of women who have experienced intimate partner violence (%) |
|---------------------------|----------------|
|                          | Ever/Lifetime | In the last 12 months |
| 15-19                    | 15.4%         | 18.6%                |
| 20-24                    | 10.1%         | 21.2%                |
| 25-29                    | 9.5%          | 23.5%                |
| 30-34                    | 8.0%          | 25.4%                |
| 35-44                    | 7.5%          | 27.2%                |
| 45-54                    | 5.7%          | 27.6%                |
| 55-64                    | 4.4%          | 27.8%                |
| 65+                      | 3.9%          | 28.0%                |
