138 women die per 100,000 live births due to pregnancy-related causes in South Asia

The maternal mortality ratio in South Asia has improved from 417 in 2000 to 138 in 2020. Maternal mortality in South Asia is lower than the world average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

29 of every 1,000 girls ages 15-19 gave birth in South Asia in 2021

In South Asia, the rate of adolescent fertility has decreased since 2010. The rate in 2021 is lower than the world average.

81.3% of girls and 78.5% of boys complete lower secondary school in South Asia as of 2020 data

The rates for girls and boys completing lower secondary school in South Asia are roughly the same as the global rates (girls: 78%, boys: 77%). Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in South Asia is lower among women than among men (2020)

The gap in adult literacy between men and women 15.7, is larger than the gap of the world aggregate, 6.7. The adult literacy rates for both women and men in South Asia are lower than the global rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

In South Asia, the labor force participation rate in females is 25.6% and in males is 74.7%.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with the labor force participation in the world, the gap between men and women is higher in South Asia.

Vulnerable employment for females has improved in South Asia since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 74.1% and among men is 67.3% in South Asia for 2021.

By the time they are 19 years old, roughly 1 in 3 adolescent girls from South Asia who have been in a relationship will have ever been physically or sexually abused by a current or former partner

Lifetime intimate partner violence (IPV) measures the proportion of the female population who have ever experienced such violence at least once in their lifetime. IPV in the past year indicates how prevalent this violence still is in society today and is globally reported on as SDG indicator 5.2.1. In South Asia, adolescent girls and young women are more at risk of experiencing IPV in the last 12 months than adult women.
