70 women die per 100,000 live births due to pregnancy-related causes in The Bahamas

The maternal mortality ratio in The Bahamas has remained stagnant over the last 20 years roughly around 70. Maternal mortality in The Bahamas is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

28 of every 1,000 girls ages 15-19 gave birth in The Bahamas in 2019

In The Bahamas, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was higher than the average rate in its income group.

92% of girls and 92.4% of boys complete lower secondary school in The Bahamas as of 2010 data

The female rate in The Bahamas is higher than Latin America & Caribbean but lower than the high-income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Data is not available for The Bahamas for Adult literacy rate, by sex (% of people ages 15 and above)
In The Bahamas, the labor force participation rate among females is 70.1% and among males is 81.6% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is lower in The Bahamas.

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 4.2% and among men is 13.9% in The Bahamas for 2019. The rate of vulnerable employment is lower for men and women in The Bahamas compared to the average rate in Latin America & Caribbean.
