In Burundi, the labor force participation rate among females is 80.5% and among males is 77.9% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has decreased. Compared with labor force participation in the low-income group, the gap between men and women is lower in Burundi.

Vulnerable employment for females has worsened in Burundi since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 89.8% and among men is 78.9% in Burundi for 2019. The rate of vulnerable employment is higher for men and women in Burundi compared to the average rate in Sub-Saharan Africa.

Data is not available for Burundi for Proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day).
In 2014, 6.7% of women and 7.5% of men in Burundi had an account.

The female rate in Burundi is lower than both Sub-Saharan Africa and the low-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

56.1% of men and 56.3% of women owned a dwelling either alone or jointly in 2017.

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.

60.3% of women participated in making major decisions in the household in 2017.

Women participating in making major decisions is the percentage of currently married women ages 15-49 who say that they alone or jointly have the final say in (i) making major household purchases, (ii) decisions about own healthcare, and (iii) visits to family, relatives, friends.
In Burundi, the share of women who have experienced intimate partner violence is greater than the world average, 27%.

Intimate partner violence is by far the most prevalent form of violence against women globally and is defined as the percentage of ever-married women (ages 15-49) who have ever experienced physical or sexual violence committed by their husband or partner, whereas those who have ever experienced any form of sexual violence is the percentage of women (ages 15-49) who ever experienced sexual violence irrespective of marital status and perpetrator.

Percentage of women ages 15-49 who have ever experienced:
