10 women die per 100,000 live births due to pregnancy-related causes in Canada

The maternal mortality ratio in Canada has remained stagnant over the last 20 years roughly around 10. Maternal mortality in Canada is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

8 of every 1,000 girls ages 15-19 gave birth in Canada in 2019

In Canada, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

Data is not available for Canada for Lower secondary completion rate, by sex (% of relevant age group)

Data is not available for Canada for Adult literacy rate, by sex (% of people ages 15 and above)
In Canada, the labor force participation rate among females is 61.1% and among males is 70.1% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is lower in Canada.

Vulnerable employment for females has worsened in Canada since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 9.3% and among men is 12.2% in Canada for 2019. The rate of vulnerable employment is higher for men and women in Canada compared to the average rate in North America.
In Canada, women spend 1.5 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2016, women in Canada spent 14.6% of their day and men spent 9.6% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

In 2017, 99.9% of women and 99.6% of men in Canada had an account.

The female rate in Canada is higher than both North America and the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.
