6 of every 1,000 girls ages 15-19 gave birth in Channel Islands in 2019

In Channel Islands, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.
In Channel Islands, the labor force participation rate among females is 51.7% and among males is 65.9% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is similar in Channel Islands.

Vulnerable employment for females has improved in Channel Islands since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 10.2% and among men is 10.2% in Channel Islands for 2019. The rate of vulnerable employment is lower for men but similar for women in Channel Islands compared to the average rate in Europe & Central Asia.
