3 women die per 100,000 live births due to pregnancy-related causes in the Czech Republic

The maternal mortality ratio in the Czech Republic has remained stagnant over the last 20 years roughly around 3. Maternal mortality in the Czech Republic is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

12 of every 1,000 girls ages 15-19 gave birth in the Czech Republic in 2019

In the Czech Republic, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

92.8% of girls and 91.2% of boys complete lower secondary school in the Czech Republic as of 2019 data

The female rate in the Czech Republic is lower than both Europe & Central Asia and the high-income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Data is not available for the Czech Republic for Adult literacy rate, by sex (% of people ages 15 and above)
In the Czech Republic, the labor force participation rate among females is 52.8% and among males is 68.6% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the high-income group, the gap between men and women is similar in the Czech Republic.

Vulnerable employment for females has worsened in the Czech Republic since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 10.5% and among men is 16.4% in the Czech Republic for 2019. The rate of vulnerable employment is similar for men and women in the Czech Republic compared to the average rate in Europe & Central Asia.
In 2017, 78.6% of women and 83.6% of men in the Czech Republic had an account.

The female rate in the Czech Republic is nearly the same as Europe & Central Asia but lower than the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

**Account ownership at a financial institution or with a mobile-money-service provider, by sex (% of population ages 15+)**

- **Female**
- **Male**
