12 women die per 100,000 live births due to pregnancy-related causes in Hungary

The maternal mortality ratio in Hungary has remained stagnant over the last 20 years roughly around 12. Maternal mortality in Hungary is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

25 of every 1,000 girls ages 15-19 gave birth in Hungary in 2019

In Hungary, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was higher than the average rate in its income group.

94.2% of girls and 93.3% of boys complete lower secondary school in Hungary as of 2019 data

The female rate in Hungary is lower than both Europe & Central Asia and the high-income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in Hungary is nearly the same among women and men (2014)

In Hungary, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.
In Hungary, the labor force participation rate among females is 48.5% and among males is 66.3% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the high-income group, the gap between men and women is higher in Hungary.

Vulnerable employment for females has improved in Hungary since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 5.4% and among men is 7.1% in Hungary for 2019. The rate of vulnerable employment is lower for men and women in Hungary compared to the average rate in Europe & Central Asia.
In Hungary, women spend 2.2 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2010, women in Hungary spent 17.3% of their day and men spent 8% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

In 2017, 72.2% of women and 78.2% of men in Hungary had an account.

The female rate in Hungary is lower than both Europe & Central Asia and the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

Data is not available for Hungary for House ownership status, by sex (% of population age 15-49)

---

**12.1% of seats in national parliament were held by women in 2020 in Hungary**

Women in parliaments are the percentage of parliamentary seats in a single or lower chamber held by women. The proportion of seats held by women in Hungary has increased since 2010. The current rate is lower than the average rate in high-income countries.

**Women represented 35.9% of those employed in senior and middle management in 2019**

The female share of employment in senior and middle management for Hungary falls in the fourth quintile of all countries for which there are data.
