5 women die per 100,000 live births due to pregnancy-related causes in Ireland

The maternal mortality ratio in Ireland has remained stagnant over the last 20 years roughly around 5. Maternal mortality in Ireland is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

7 of every 1,000 girls ages 15-19 gave birth in Ireland in 2019

In Ireland, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

102.2% of girls and 100.2% of boys complete lower secondary school in Ireland as of 2019 data

Girls and boys in Ireland have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Data is not available for Ireland for Adult literacy rate, by sex (% of people ages 15 and above)
In Ireland, the labor force participation rate among females is 56.3% and among males is 68.8% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is lower in Ireland.

Vulnerable employment for females has improved in Ireland since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 5.6% and among men is 14.1% in Ireland for 2019. The rate of vulnerable employment is similar for men but lower for women in Ireland compared to the average rate in Europe & Central Asia.

Data is not available for Ireland for proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day).
In 2017, 95.3% of women and 95.4% of men in Ireland had an account. The female rate in Ireland is higher than both Europe & Central Asia and the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.
22.5% of seats in national parliament were held by women in 2020 in Ireland

Women in parliaments are the percentage of parliamentary seats in a single or lower chamber held by women. The proportion of seats held by women in Ireland has increased since 2010. The current rate is lower than the average rate in high-income countries.

Seats held by women in national parliaments, female (%)

Women represented 31.3% of those employed in senior and middle management in 2019

The female share of employment in senior and middle management for Ireland falls in the third quintile of all countries for which there are data. Data compiled from the most recent data point available between 2010 and 2020.

Employment in senior and middle management, female (%)

More men than women used the internet to pay bills or to buy something online in 2017

The female rate in Ireland is higher than both Europe & Central Asia and the high-income group. Internet usage denotes the percentage of respondents who report using the internet to pay bills or buy something online in the past 12 months.
