3 women die per 100,000 live births due to pregnancy-related causes in Israel

The maternal mortality ratio in Israel has remained stagnant over the last 20 years roughly around 3. Maternal mortality in Israel is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

9 of every 1,000 girls ages 15-19 gave birth in Israel in 2019

In Israel, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

103.9% of girls and 102.6% of boys complete lower secondary school in Israel as of 2019 data

Girls and boys in Israel have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Data is not available for Israel for Adult literacy rate, by sex (% of people ages 15 and above)
In Israel, the labor force participation rate among females is 59.6% and among males is 68% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is lower in Israel.

Vulnerable employment for females has worsened in Israel since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 7.6% and among men is 9% in Israel for 2019. The rate of vulnerable employment is lower for men and women in Israel compared to the average rate in Middle East & North Africa.

Data is not available for Israel for Proportion of time spent on unpaid domestic and care work by sex (% of 24 hour day).
In 2017, 93.7% of women and 91.9% of men in Israel had an account.

The female rate in Israel is higher than Middle East & North Africa but nearly the same as the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

Account ownership at a financial institution or with a mobile-money-service provider, by sex (% of population ages 15+)
