5 women die per 100,000 live births due to pregnancy-related causes in Japan

The maternal mortality ratio in Japan has remained stagnant over the last 20 years roughly around 5. Maternal mortality in Japan is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

4 of every 1,000 girls ages 15-19 gave birth in Japan in 2019

In Japan, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was lower than the average rate in its income group.
In Japan, the labor force participation rate among females is 53.6% and among males is 71.7% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is higher in Japan.

Vulnerable employment for females has improved in Japan since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 7.7% and among men is 8.6% in Japan for 2019. The rate of vulnerable employment is lower for men and women in Japan compared to the average rate in East Asia & Pacific.
In Japan, women spend 4.8 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2016, women in Japan spent 15.1% of their day and men spent 3.1% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

Data is not available for Japan for Share of business owners, by sex (% of total business owners).

In 2017, 98.1% of women and 98.5% of men in Japan had an account.

The female rate in Japan is higher than both East Asia & Pacific and the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

Data is not available for Japan for House ownership status, by sex (% of population age 15-49).
