46 women die per 100,000 live births due to pregnancy-related causes in Jordan

The maternal mortality ratio in Jordan has improved from 70 in 2000 to 46 in 2017. Maternal mortality in Jordan is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

26 of every 1,000 girls ages 15-19 gave birth in Jordan in 2019

In Jordan, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

67% of girls and 65.7% of boys complete lower secondary school in Jordan as of 2020 data

The female rate in Jordan is lower than both Middle East & North Africa and the upper-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in Jordan is nearly the same among women and men (2018)

In Jordan, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.
In Jordan, the labor force participation rate among females is 14.6% and among males is 63.9% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the upper-middle income group, the gap between men and women is higher in Jordan.

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 1.6% and among men is 12.4% in Jordan for 2019. The rate of vulnerable employment is lower for men and women in Jordan compared to the average rate in Middle East & North Africa.

Data is not available for Jordan for Proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day).
More men than women owned a business in 2018

The share of female business owners for Jordan falls in the second quintile of all countries for which there are data. Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2016 and 2018.

In 2017, 26.6% of women and 56.3% of men in Jordan had an account

The gap in account ownership between men and women in Jordan, 29.7, is larger than the gap of the Middle East & North Africa aggregate, 18.8. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

31% of men and 11.2% of women owned a dwelling either alone or jointly in 2018

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.

77.8% of women participated in making major decisions in the household in 2018

Women participating in making major decisions is the percentage of currently married women ages 15-49 who say that they alone or jointly have the final say in (i) making major household purchases, (ii) decisions about own healthcare, and (iii) visits to family, relatives, friends.
In Jordan, the share of women who have experienced intimate partner violence is less than the world average, 27%.

Intimate partner violence is by far the most prevalent form of violence against women globally and is defined as the percentage of ever-married women (ages 15-49) who have ever experienced physical or sexual violence committed by their husband or partner, whereas those who have ever experienced any form of sexual violence is the percentage of women (ages 15-49) who ever experienced sexual violence irrespective of marital status and perpetrator.

Percentage of women ages 15-49 who have ever experienced:
