186 women die per 100,000 live births due to pregnancy-related causes in Nepal

The maternal mortality ratio in Nepal has improved from 553 in 2000 to 186 in 2017. Maternal mortality in Nepal is higher than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

64 of every 1,000 girls ages 15-19 gave birth in Nepal in 2019

In Nepal, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was higher than the average rate in its income group.

99.4% of girls and 99.5% of boys complete lower secondary school in Nepal as of 2020 data

Girls and boys in Nepal have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

31.9% of children of school age in Nepal are out of school.

Adult literacy in Nepal is lower among women than among men (2018)

The gap in adult literacy between men and women, 18.9, is larger than the gap of the South Asia aggregate, 15.8. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.
In Nepal, the labor force participation rate among females is 81.5% and among males is 83.7% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Nepal.

Vulnerable employment for females has improved in Nepal since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 87.5% and among men is 62.2% in Nepal for 2019. The rate of vulnerable employment is lower for men but higher for women in Nepal compared to the average rate in South Asia.

Data is not available for Nepal for proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day).
More men than women owned a business in 2018

The share of female business owners for Nepal falls in the second quintile of all countries for which there are data. Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2016 and 2018.

Account ownership at a financial institution or with a mobile-money-service provider, by sex (% of population ages 15+)

In 2017, 41.6% of women and 50% of men in Nepal had an account

The female rate in Nepal is lower than both South Asia and the lower-middle income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

19.3% of men and 7.8% of women owned a dwelling either alone or jointly in 2016

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women's empowerment, nutritional and health outcomes, and children’s schooling.

In Nepal, the share of women who have experienced intimate partner violence is less than the world average. 27%

Intimate partner violence is by far the most prevalent form of violence against women globally and is defined as the percentage of ever-married women (ages 15-49) who have ever experienced physical or sexual violence committed by their husband or partner, whereas those who have ever experienced any form of sexual violence is the percentage of women (ages 15-49) who ever experienced sexual violence irrespective of marital status and perpetrator.

Percentage of women ages 15-49 who have ever experienced:

Any form of sexual violence  Intimate partner violence

6.9%  24.3%

32.7% of seats in national parliament were held by women in 2020 in Nepal

Women in parliaments are the percentage of parliamentary seats in a single or lower chamber held by women. The proportion of seats held by women in Nepal has remained roughly the same as 2010. The current rate is higher than the average rate in lower-middle income countries.

Seats held by women in national parliaments, female (%)

Women represented 13.9% of those employed in senior and middle management in 2017

The female share of employment in senior and middle management for Nepal falls in the lowest quintile of all countries for which there are data. Data compiled from the most recent data point available between 2010 and 2020.

Employment in senior and middle management, female (%)

More men than women used the internet to pay bills or to buy something online in 2017

The female rate in Nepal is lower than both South Asia and the lower-middle income group. Internet usage denotes the percentage of respondents who report using the internet to pay bills or buy something online in the past 12 months.

Used the internet to pay bills or to buy something online in the past year, by sex (% age 15+)
