In New Caledonia, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

14 of every 1,000 girls ages 15-19 gave birth in New Caledonia in 2019

In New Caledonia, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.
In New Caledonia, the labor force participation rate among females is 57.8% and among males is 68.6% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the high-income group, the gap between men and women is lower in New Caledonia.

Vulnerable employment for females has worsened in New Caledonia since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 10.9% and among men is 16% in New Caledonia for 2019. The rate of vulnerable employment is lower for men and women in New Caledonia compared to the average rate in East Asia & Pacific.
