145 women die per 100,000 live births due to pregnancy-related causes in Papua New Guinea

The maternal mortality ratio in Papua New Guinea has improved from 249 in 2000 to 145 in 2017. Maternal mortality in Papua New Guinea is higher than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

51 of every 1,000 girls ages 15-19 gave birth in Papua New Guinea in 2019

In Papua New Guinea, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was higher than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

31.8% of girls and 42.3% of boys complete lower secondary school in Papua New Guinea as of 2018 data

The gap in lower secondary completion rate between boys and girls, 10.5, is larger than the gap of the East Asia & Pacific aggregate, 2.8. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in Papua New Guinea is lower among women than among men (2010)

The adult female literacy rate in Papua New Guinea is lower than in East Asia & Pacific. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)
In Papua New Guinea, the labor force participation rate is nearly the same: 46.4% among females and 47.6% among males for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has decreased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Papua New Guinea.

Vulnerable employment for females has improved in Papua New Guinea since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 84% and among men is 64.4% in Papua New Guinea for 2019. The rate of vulnerable employment is higher for men and women in Papua New Guinea compared to the average rate in East Asia & Pacific.

Data is not available for Papua New Guinea for proportion of time spent on unpaid domestic and care work by sex (% of 24 hour day).
Data is not available for Papua New Guinea for Share of business owners, by sex (% of total business owners)

Data is not available for Papua New Guinea for Account ownership at a financial institution or with a mobile-money-service provider, by sex (% of population ages 15+)

59.7% of men and 50.1% of women owned a dwelling either alone or jointly in 2018

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women's empowerment, nutritional and health outcomes, and children's schooling.

House ownership status, by sex (% of population age 15-49)
