9 women die per 100,000 live births due to pregnancy-related causes in Qatar

The maternal mortality ratio in Qatar has remained stagnant over the last 20 years roughly around 9. Maternal mortality in Qatar is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

9 of every 1,000 girls ages 15-19 gave birth in Qatar in 2019

In Qatar, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was nearly the same as the average rate in its income group.

90% of girls and 97.6% of boys complete lower secondary school in Qatar as of 2020 data

The gap in lower secondary completion rate between boys and girls, 7.6, is larger than the gap of the Middle East & North Africa aggregate, 1.4. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Adult literacy in Qatar is nearly the same among women and men (2017)

In Qatar, both women and men have very high literacy rates. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Lower secondary completion rate, by sex (% of relevant age group)

In Qatar, the labor force participation rate among females is 56.6% and among males is 94.8% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the high-income group, the gap between men and women is higher in Qatar.

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 0.1% and among men is 0.2% in Qatar for 2019. The rate of vulnerable employment is lower for men and women in Qatar compared to the average rate in Middle East & North Africa.
In Qatar, women spend 3.7 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2013, women in Qatar spent 8.2% of their day and men spent 2.2% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

More men than women owned a business in 2018

The share of female business owners for Qatar falls in the lowest quintile of all countries for which there are data. Share of business is calculated as the proportion of female or male newly registered limited liability company owners out of the total number of newly registered limited liability company owners in the economy in the calendar year. Data compiled from the most recent data point between 2016 and 2018.

In 2011, 61.6% of women and 68.6% of men in Qatar had an account

The female rate in Qatar is higher than Middle East & North Africa but lower than the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.
