4 women die per 100,000 live births due to pregnancy-related causes in Sweden

The maternal mortality ratio in Sweden has remained stagnant over the last 20 years roughly around 4. Maternal mortality in Sweden is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

5 of every 1,000 girls ages 15-19 gave birth in Sweden in 2019

In Sweden, the rate of adolescent fertility has remained roughly the same since 2010. The rate in 2019 was lower than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

106.5% of girls and 108.7% of boys complete lower secondary school in Sweden as of 2019 data

Girls and boys in Sweden have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Data is not available for Sweden for Adult literacy rate, by sex (% of people ages 15 and above)
In Sweden, the labor force participation rate among females is 61.2% and among males is 67.7% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the high-income group, the gap between men and women is lower in Sweden.

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 4.2% and among men is 8.1% in Sweden for 2019. The rate of vulnerable employment is lower for men and women in Sweden compared to the average rate in Europe & Central Asia.
In Sweden, women spend 1.3 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2011, women in Sweden spent 16% of their day and men spent 12.8% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

Data is not available for Sweden for Share of business owners, by sex (% of total business owners).

In 2017, 100% of women and 99.5% of men in Sweden had an account.

The female rate in Sweden is higher than both Europe & Central Asia and the high-income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

Data is not available for Sweden for House ownership status, by sex (% of population age 15-49).
More men than women used the internet to pay bills or to buy something online in 2017

The female rate in Sweden is higher than both Europe & Central Asia and the high-income group. Internet usage denotes the percentage of respondents who report using the internet to pay bills or buy something online in the past 12 months.
