19 women die per 100,000 live births due to pregnancy-related causes in the United States

The maternal mortality ratio in the United States has remained stagnant over the last 20 years roughly around 19. Maternal mortality in the United States is nearly the same as its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

17 of every 1,000 girls ages 15-19 gave birth in the United States in 2019

In the United States, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was higher than the average rate in its income group.

103.7% of girls and 103.1% of boys complete lower secondary school in the United States as of 2019 data

Girls and boys in the United States have a very high completion rate of lower secondary school. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Data is not available for the United States for Adult literacy rate, by sex (% of people ages 15 and above)
In the United States, the labor force participation rate among females is 56.8% and among males is 68.6% for 2019.

The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has remained roughly the same. Compared with labor force participation in the high-income group, the gap between men and women is lower in the United States.

Vulnerable employment among women has remained nearly the same since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 3.5% and among men is 4.3% in the United States for 2019. The rate of vulnerable employment is similar for men and women in the United States compared to the average rate in North America.
In the United States, women spend 1.6 times as much time on unpaid domestic and care work than men.

The data, expressed as a proportion of time in a day, measure the average time an individual spends on household provision of services for own consumption. In 2019, women in the United States spent 15.3% of their day and men spent 9.7% of their day on unpaid work. Data compiled from the most recent data point between 2010 and 2019.

In 2017, 92.7% of women and 93.6% of men in the United States had an account.

The national rate for women having accounts is similar to the average rate within North America and among high-income countries. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

Data is not available for the United States for Share of business owners, by sex (% of total business owners).

Data is not available for the United States for House ownership status, by sex (% of population age 15-49).
27.5% of seats in national parliament were held by women in 2020 in the United States.

Women in parliaments are the percentage of parliamentary seats in a single or lower chamber held by women. The proportion of seats held by women in the United States has increased since 2010. The current rate is lower than the average rate in high-income countries.

Women represented 41.9% of those employed in senior and middle management in 2020.

The female share of employment in senior and middle management for the United States falls in the highest quintile of all countries for which there are data. Data compiled from the most recent data point available between 2010 and 2020.

In 2017 women and men used the internet to pay bills or to buy something online at approximately the same rate.

The female rate in the United States is nearly the same as North America but higher than the high-income group. Internet usage denotes the percentage of respondents who report using the internet to pay bills or buy something online in the past 12 months.
