458 women die per 100,000 live births due to pregnancy-related causes in Zimbabwe

The maternal mortality ratio in Zimbabwe has improved from 579 in 2000 to 458 in 2017. Maternal mortality in Zimbabwe is lower than its regional average. Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

Maternal mortality ratio (deaths per 100,000 live births)

80 of every 1,000 girls ages 15-19 gave birth in Zimbabwe in 2019

In Zimbabwe, the rate of adolescent fertility has decreased since 2010. The rate in 2019 was higher than the average rate in its income group.

Adolescent fertility rate (births per 1,000 women ages 15-19)

67% of girls and 68.9% of boys complete lower secondary school in Zimbabwe as of 2020 data

The female rate in Zimbabwe is higher than Sub-Saharan Africa but lower than the lower-middle income group. Lower secondary education completion rate measures how many children have completed the last grade of lower secondary education regardless of age completed.

Lower secondary completion rate, by sex (% of relevant age group)

Adult literacy in Zimbabwe is nearly the same among women and men (2014)

The adult female literacy rate in Zimbabwe is higher than in Sub-Saharan Africa. Adult literacy rate is the percentage of people ages 15 and above who can both read and write with understanding a short simple statement about their everyday life.

Adult literacy rate, by sex (% of people ages 15 and above)
In Zimbabwe, the labor force participation rate among females is 78.1% and among males is 88.9% for 2019. The labor force participation rate is the proportion of the population ages 15 and older that is economically active. Since 1990, female labor force participation has increased. Compared with labor force participation in the lower-middle income group, the gap between men and women is lower in Zimbabwe.

**Labor force participation rate, by sex (% of population ages 15+) (modeled ILO estimate)**

Vulnerable employment for females has improved in Zimbabwe since 1991.

Workers in vulnerable employment are the least likely to have formal work arrangements, social protection, and safety nets to guard against economic shocks; thus they are more likely to fall into poverty. Vulnerable employment among women is 79.3% and among men is 57.1% in Zimbabwe for 2019. The rate of vulnerable employment is lower for men but similar for women in Zimbabwe compared to the average rate in Sub-Saharan Africa.

Data is not available for Zimbabwe for Proportion of time spent on unpaid domestic and care work, by sex (% of 24 hour day).
In 2017, 51.7% of women and 59.2% of men in Zimbabwe had an account.

The female rate in Zimbabwe is higher than Sub-Saharan Africa but nearly the same as the lower-middle income group. Account ownership denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution or report personally using a mobile money service in the past 12 months.

38.4% of men and 36.7% of women owned a dwelling either alone or jointly in 2015.

For women in particular, asset ownership is a source of economic empowerment and provides protection in the case of marital dissolution or abandonment. There is increasing evidence that ownership of property by women has positive consequences for women’s empowerment, nutritional and health outcomes, and children’s schooling.

72.1% of women participated in making major decisions in the household in 2015.

Women participating in making major decisions is the percentage of currently married women ages 15-49 who say that they alone or jointly have the final say in (i) making major household purchases, (ii) decisions about own healthcare, and (iii) visits to family, relatives, friends.
In Zimbabwe, the share of women who have experienced intimate partner violence is greater than the world average, 27%.

Intimate partner violence is by far the most prevalent form of violence against women globally and is defined as the percentage of ever-married women (ages 15-49) who have ever experienced physical or sexual violence committed by their husband or partner, whereas those who have ever experienced any form of sexual violence is the percentage of women (ages 15-49) who ever experienced sexual violence irrespective of marital status and perpetrator.

Percentage of women ages 15-49 who have ever experienced:
